

PROINVEST ERP with SCM/CRM and PM Software Solutions for your entire business

Businesses around the world rely on our products and services to help them work smarter, faster and more profitably. Our wide range of products and services,

have been developed to benefit all areas of your business, from improved communications, marketing and business systems to better management of your staff.

These will help you increase efficiency while benefiting from significant cost savings.

Enterprise resource planning system is modular software packages designed to integrate the key processes in an organization so that a single system can serve the information needs of all functional areas.

Our Core Applications ERP systems typically include two groups of applications: core applications and business analysis applications.

A. Core applications support the day-to-day activities of the business.

B. And On-Line Analytical Processing Besides providing extensive transaction processing capability, an ERP also provides management with extensive support for management decision making. On-line Analytical Processing (OLAP) includes decision support, modeling, information retrieval, ad-hoc reporting/analysis, and what-if capabilities. ProInvest Software Solution package provides all of these, and others can be modified with third party add-ons, often called bolt-on packages.

A key element necessary for ProInvest ERP to provide business analysis is the data warehouse. This is a database designed for quick search, retrieval, query, etc. Typically, an

ERP implementation includes both operational and data warehouse databases.

Historical data can be voluminous. Our solution supports both On-line Transaction Processing (OLTP) events relate to current activities of the business and OLAP involves on-line transactions that include large amounts of data used for extensive analysis. OLTP applications support mission-critical tasks. OLAP applications support management-critical tasks through analysis of data in the data warehouses.

The bolt-on softwares may include Supply Chain Management (SCM) software, Customer Relationship Management (CRM), Project Management (PM) and Business Intelligence (BI) tool. Management of the supply chain is being recognized as crucial to the success of businesses.

The ERP system is multi-module off the shelf software suite that seek to integrate and optimizes your company's information flow, business processes, functions and provide data in real-time. Lured by the numerous advantages of ERP solution and with the ability to deliver competitive advantage, companies worldwide have substantially INVESTED in ProInvest's ERP solutions. The application is easy to use, reliable while the implementation and roll-out are within time schedule. With our expertise and the level of support is always on time to troubleshoot any problem that may arise. We make sure that endusers and the organization are both beneficial during the post implementation stage for long-term ERP assimilation success. We follow a Five point steps to successful Implementation:-

1. STRATEGIC PLANNING
2. PROCEDURE REVIEW
3. DATA COLLECTION & CLEAN-UP
4. TRAINING AND TESTING
5. GO LIVE AND EVALUATION
